

# MultiFlex system facts

Introducing the Ellipse multi-tech solution

The Ellipse MultiFlex supports a wide range of treatments on a laser/I<sup>2</sup>PL platform. A modular, upgradeable design meets current and future requirements.

**Versatile platform**

Utilising both laser and I<sup>2</sup>PL technologies, the Ellipse MultiFlex offers physicians the opportunity to meet patients' increasing demand for aesthetic procedures with a single, versatile machine.

New practices can start out with just the most popular treatment options – and then add options as the practice grows.

**Future-proof**

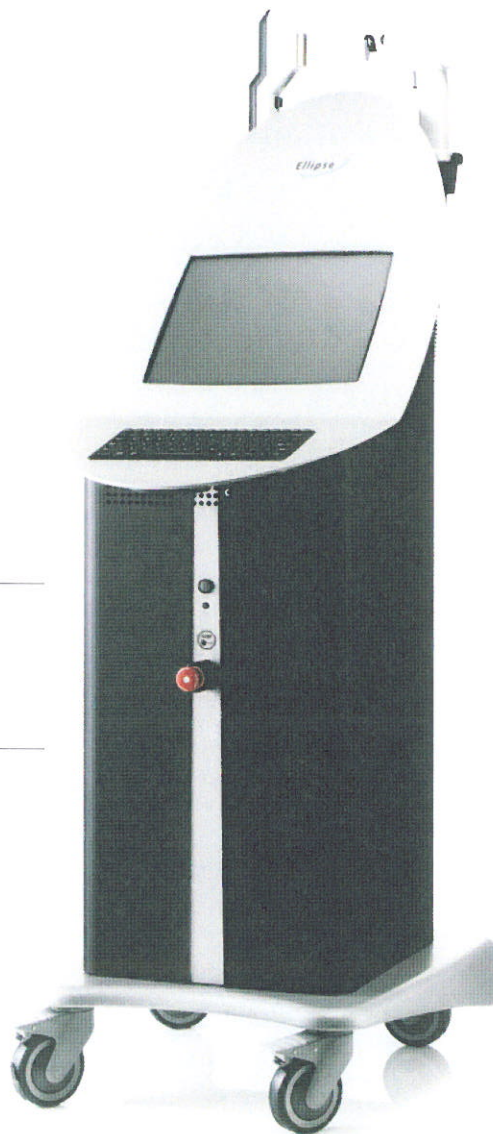

The Ellipse MultiFlex offers an upgradeable path that accommo-

*Seven different I<sup>2</sup>PL handpieces are currently available, providing a range of treatment options.*

*Applications*

- Hair removal
- Vascular lesions
- Pigmented lesions
- Photo rejuvenation
- Acne vulgaris

The Ellipse MultiFlex

“Ellipse provides me with hair removal capability that easily rivals some of the best hair removal treatments from the leading laser systems on the market. The easy user interface enables me to adjust any of the client parameters such as skin type, degree of suntan and hair thickness.”

Stanford University, Palo Alto, CA*

*A built-in patient database stores all individual patient data and corresponding treatment parameters, which saves time during follow-up treatments.*

dates growing laser and I<sup>2</sup>PL needs. Eight different handpieces are currently available, with more to follow.

**Safe delegation**

Built-in clinical intelligence ensures effective treatment and reduces the risk of side effects. In the “Normal” operating mode, the Ellipse MultiFlex chooses appropriate and safe default treatment settings based on the operator's evaluation of patient parameters. This enables physicians to safely delegate treatments.

*The I<sup>2</sup>PL handpieces are used for treatment of facial hair.*
